

DOMI MOBILE APP

Connecting In-Home Caregivers with Care Seekers Across Canada

Team: Neel Ray, Osman Servin, Rohan Singh | **Sponsor:** Netsanet Kidane

PROJECT REQUIREMENTS

Cross-platform mobile application that enhances how in-home caregivers and care seekers connect and manage care services.

Functional:

- Profile management for providers and seekers
- Application browsing and job selection
- Booking and upcoming visits
- Real-time messaging
- Booking and cancellation system
- ID verification and authentication

Performance:

- Response time under 1 second
- Support for large concurrent users
- Efficient database queries
- Fast authentication and verification
- Smooth cross-platform performance

Constraints:

- Cross-platform mobile application
- Canadian data security standards
- MVP ready for testing by year-end
- 1st time developing a mobile application.

Design Choices and

Justifications:

- Cross platform compatibility with the Flutter framework
- MVC architecture promoting scalability

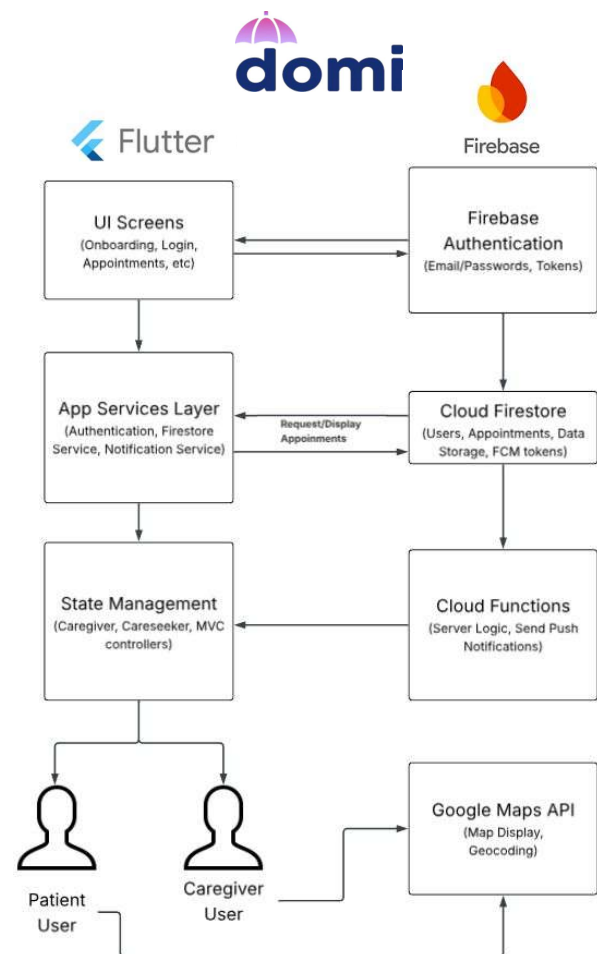

- Authentication and storage from Firebase for saving cloud data securely to the cloud
- Privacy optimized with 2FA and Firestore Rules

Future Plans:

- Payment portal
- Messaging system

Results:

- User sign up and login with 2FA and forgot password functionality
- Partial completion of onboarding process
- Appointment booking and cancellation
- Push notifications and location service
